

Invoice PDF Storage & Viewer Feature

Simple Overview for the Whole Team (Non-IT Friendly)

What is This Project?

When an invoice arrives via **email** (through Power Automate) or via an **SFTP folder** (file watcher), the system already reads its content for data entry — but the actual **PDF file itself is not yet saved**. The goal of this project is to **store the original PDF** on the server, link it to the correct invoice record, and add a simple **"View PDF" button** to the dashboard so the Accounting Team can easily open or download it — any time.

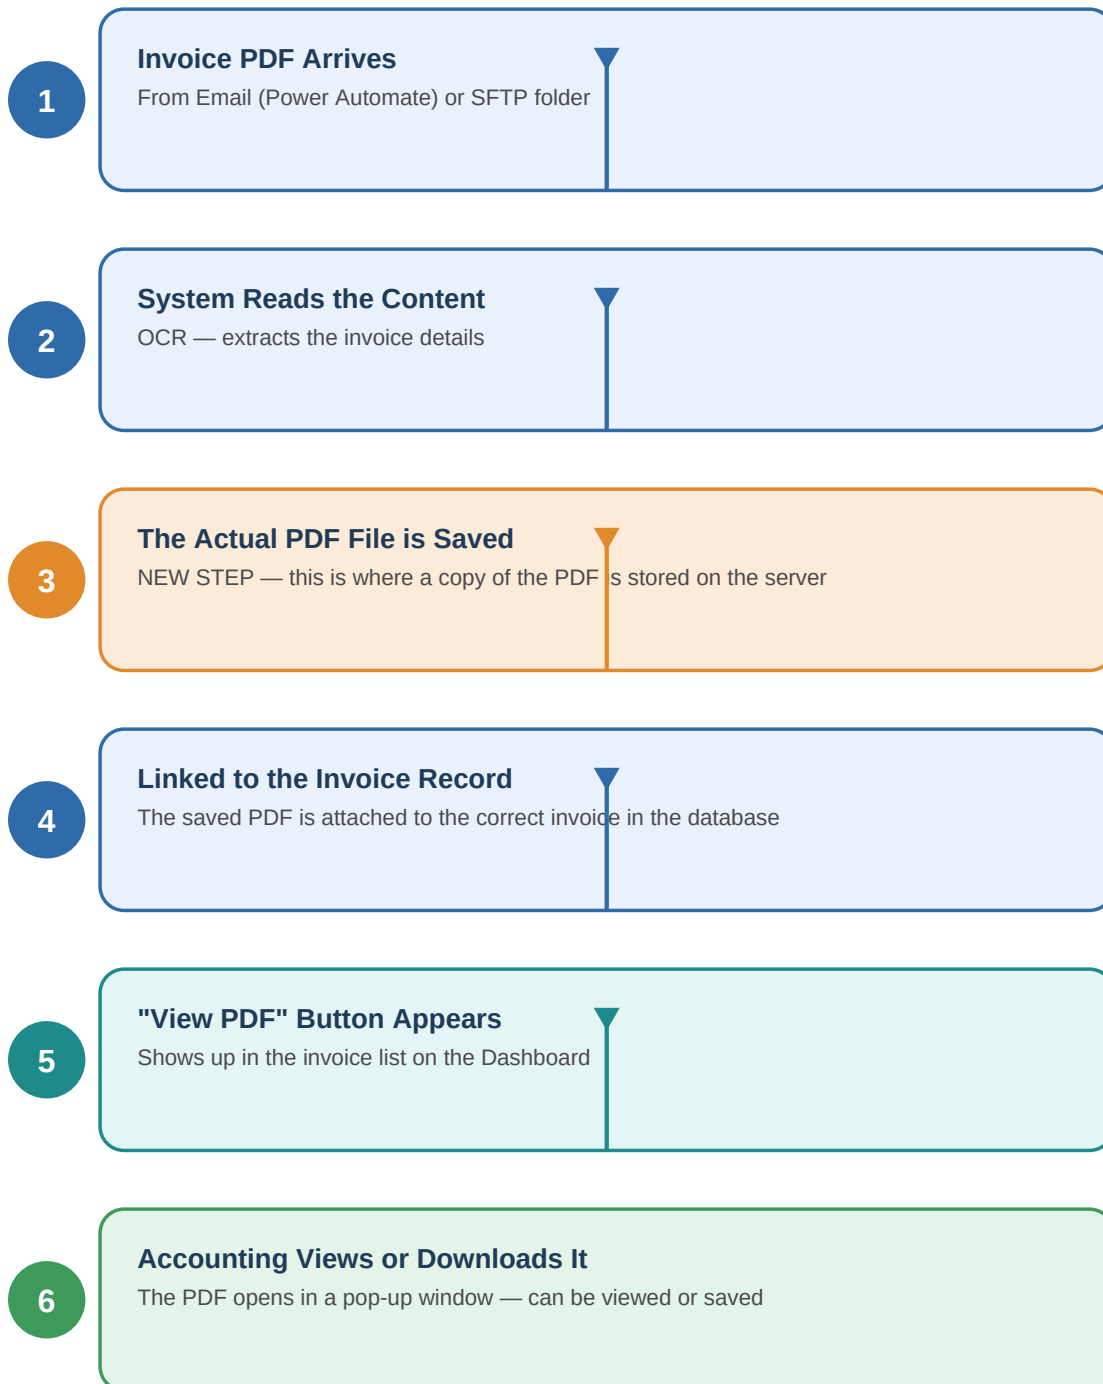

Before vs. After the Project

Comparing how the original invoice file is retrieved, before and after the project.

Full Process: From Invoice Arrival to Viewing It

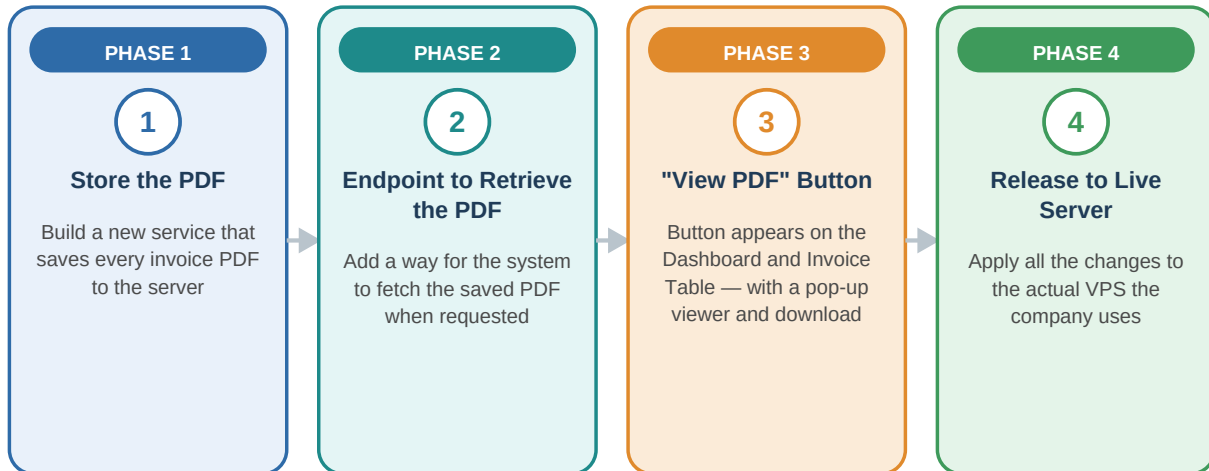

Here is the complete flow starting from the invoice PDF arriving all the way to Accounting opening it on the dashboard:

Every incoming invoice automatically goes through these 6 steps.

Development Steps (4 Phases)

The work will be split into 4 phases, starting behind the scenes (backend) all the way to what users actually see on the dashboard, and finally, released to the live server the company uses:

These phases will be done one after another before deploying to the live server.

Why Does This Matter?

Benefit	Explanation
A copy of the original invoice	No more need to go back to email or SFTP whenever the original PDF is needed again.
Fast access for Accounting	Just 1 click to view or download the PDF straight from the dashboard — no extra steps.
Linked to the correct record	Each PDF is directly attached to its matching invoice, no manual matching needed.
No impact on existing data	No database migration needed — it simply uses the existing field.

What Doesn't Need to Change

- **Database structure** — a field (`raw_file_url`) already exists for this, nothing needs to be added.
- **Invoice search and filtering** — already works; the PDF link will simply appear alongside any result.
- **How invoices arrive** (email/SFTP) — stays the same; it just gains a "save the PDF" step.

Note: This is a simplified summary of the technical plan for easier understanding by the whole team. Detailed technical documentation is available if needed.
